

Guidance for printing mesh banners

- Use high contrast colours to maximum visibility at a distance. Use a background colour that will contrast with green trees behind the banner.
- Artwork in any of these formats: EPS, JPEG, PDF, AI, PSD.
- Artwork Size and Resolutions: Artwork can be designed at full size @ 150dpi or half size @ 300 dpi.
- Please bear in mind we print all designs in CMYK, so colour shifts can occur when designs are supplied in RGB format.
- Please convert all fonts to outlines.
- We will match colours as close as possible but some print processes may result in slight colour changes. Colours will not always print exactly as they appear on your computer monitor so please let us know if you have specific colour shades.
- For Mesh banner we recommend not placing any critical artwork/text within 5cms of any edge. Bleed of 25mms should be added to all edges.
- NB Mesh banners are slightly perforated to reduce the wind load and risk of tearing.
